# VBrick Access Procedures

VBrick is OSU's powerful capture technology that allows students to access the classroom from any computer that is connected to the Internet. VBrick allows for video to be directly linked from the video camera in the classroom to a VBrick server that captures, encodes, and posts the video to http://vbrick.okstate.edu. Students can log in using their OKey email account and see available videos from classes they are enrolled in. If you have more questions, please contact ITLE@okstate.edu.

Instructors will need to add this link to their D2L webpage or other webpage.
http://vbrick.okstate.edu/

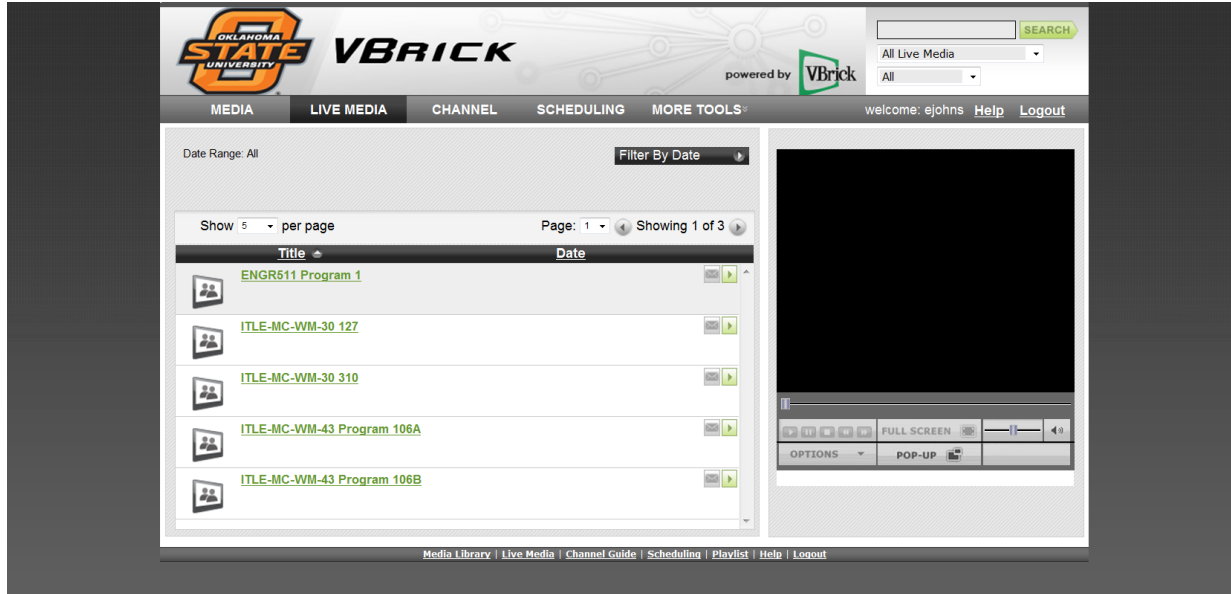

This is what the VBrick page will look like.

Students and faculty must login using their O-KEY email address and password.
Example:
Username: jdoe@okstate.edu
Password: xxxxxxxx

Once you are logged in, you will receive a screen like this.

All recorded classes will show up in this schedule. Click on the link you wish to view. Remember it may take up to 24 hours for a file to post to the server.

VBrick Help

If you are having problems with VBrick, itle.okstate.edu may be of benefit to you. There, you will find several resolutions to common problems and links to get further help. Look for the Help button on the page.
